Abstract of FR2812826

Atomizer consists of a container (10) for the fluid product, a pump or valve (20) mounted on the container by a fixing ring (30), and a nozzle (40) with an outlet (45), is new. Atomizer consists of a container (10) for the fluid product, a pump or valve (20) mounted on the container by a fixing ring (30), and a nozzle (40) with an outlet (45). Pump or valve is actuated by a side lever (51) via the fixing ring, the lever being moved in a different direction and especially perpendicular to the direction of the outlet spray. In variants of the design the pump or valve can be actuated by push button (5) or a side skirt.
